Reviews

It is an awesome book that we have possibly go through. It is actually writter in straightforward words and phrases and not confusing. It is extremely difficult to leave it before concluding, once you begin to read the book.

CO-ORDINATE GEOMETRY AN ELEMENTARY COURSE

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1914 Excerpt: . . . and, , oN2 4S2 4a 4(W--ab) (tana-tany3)2 -T and 2 (i) The angle included between the lines is a^3 , whose tangent is $\tan a \tan 3 2 V (i2--ah)----$ or $\tan a \tan 3 b(lab)$ Hence the included angle is $2-(h2-ab) \tan 1--a b$ We note that the lines are parallel if $\tan a \tan 8$, or $h2--ab$; they are perpendicular if $a 8 Tt$, or $\tan (a 8) oo$; the condition for this is that $a b 0$. If $h2--ab$ is negative the lines are not real. Note that these results will hold for any two straight lines whose joint equation is of the form $ax^2 2hxy by^2 px--qyr 0$, since the directions of the lines are determined by the terms of the second degree in the joint equation (see 58). (ii) If $y x \tan 6$ bisects the angle between $ax^2 2hxy bf 0, 6 (x3)$, or $(u a y3)$. In either case $\tan 2 0 \tan (a 3) \tan a \tan 3 2h 2h 1--\tan a \tan 3--b(l--ab) a--b$ But if y is a point on the bisector, $\tan 6 yx$, and $2 \tan f l 2yx 2xy 1-\tan 2 0 1-2a;2 x2-y2$ Therefore $5---5 z xi--yl a--b$ Hence the joint equation of the lines bisecting the angles between the lines $ax^2 2 hxy by^2 0$ is $x2--y2 xy a-b h$ Note I. If $h--ab$ is negative, we have noted above that the lines are not real. Let $ab A A;2$, another way of expressing the fact that $h--ab$ is negative. We may write...
