Excerpt: .of the metal in the valve and seating, and these cannot be used without great danger. Safety-valves should permit a free area for escape of steam equal to nnhnr to rsiws See paper by Mr. J. C. Wilson ( Proc. Inst. Mech. Eng., 1877) for the principal types of safety-valve.--Ed. of the heating surface; the higher the steam pressure the larger should be the opening. Pressure-gauges.--These serve to measure the pressure of steam. The ordinary form was formerly a mercury gauge, consisting of a bent glass or iron pipe filled to a certain height with mercury. In the glass pipe the scale was marked directly upon it; with the iron pipe a float provided with a pointer was used. Both forms had serious defects. The glass of the pipes soon lost its transparency through oxidation of the mercury; whilst in the iron pipe the...
